

Selling in the shop: seller guide

How to sell an item by scanning its label with your phone.

Use only your own login. Every sale is recorded with your name. Never give your password to anyone and never use someone else's.

1 Log in

Scan any label with the phone camera and open the link. The first time, the login page opens: enter **your own** username and password and tap **Log In**. Tick "Remember Me" on your own phone only.

2 Scan the label

Point the camera at the QR label and open the link. Check the **name, size or colour, price** and **stock** against the item in your hand.

No camera? Type the code printed under the QR (for example DC-7K4M-9P2X-Q8RT) in the **Scan or type a code** box.

A yellow or red message (out of stock, no price, out of date label...) means: do not sell, call the manager.

3 Choose the quantity

Choose how many the customer is buying. The list shows the total, for example "2 × ₹1,499.00 = ₹2,998.00".

4 Choose how the customer paid

Take the payment first, then tap **Cash, UPI, Card** or **Other**. You must always choose one.

5 Tap Confirm sale

Tap **Confirm sale** once and wait for **Sold**. The stock goes down at once. Then scan the next item.

"Someone else is selling this item right now"? Wait two seconds and tap again.

6 Mistake? Undo within 10 minutes

On the "Sold." page, tap **Undo this sale**. You can only undo your own sale, once, within 10 minutes. After that the button disappears: ask the manager to void the sale.

7 My sales

Tap **My sales** at the top to see your own sales for Today, Yesterday or the Last 7 days, with the totals for each payment method. At the end of the day, check your cash against it.

8 Log out

At the end of your shift, tap **Log out** (top right), always on a shared shop phone.

2. Check the product

3-4. Quantity and payment

6. Sold, with Undo

7. My sales

When to call the manager

- The label does not scan, or opens an error page.
- The price or product on the screen is not the item in your hand.
- You sold the wrong item or quantity and 10 minutes have passed.
- You forgot your password (the manager resets it; never borrow a login).
